A and C are "end points" B is the "apex point" Play with it here: When you move point "B", what happens to the angle? Inscribed Angle Theorems . An inscribed angle a° is half of the central angle 2a° (Called the Angle at the Center Theorem) . And (keeping the end points fixed) the angle a° is always the same, no matter where it is on the same arc between end points:

Angle Properties, Postulates, and Theorems. In order to study geometry in a logical way, it will be important to understand key mathematical properties and to know how to apply useful postulates and theorems. A postulate is a proposition that has not been proven true, but is considered to be true on the basis for mathematical reasoning.
