Ford Ranger Engine - 1999 FORD RANGER Problems With Engine

Modern engines use pretty sophisticated methods for keeping their emissions clean, and one of those is the Exhaust-Gas Recirculation (EGR) valve. On the 3.2 (and 2.2) Ranger, this valve is actually water-cooled, using the same coolant as the engine itself. The problem is that the cooler can split, leading to a loss of coolant from the radiator.

All engines at one time or another will have idle problems; Ford engines can have idle stumbling, surges and stall-outs, no matter what make and year. Engines should run smooth and evenly when at idle, never fluctuating in rpm or dying. Such symptoms have to be checked out, determining which vehicle components might ...

Problems With Ford Engines Idling | It Still Runs

There are two major kinds of starting problems with a Ford Ranger: it won't crank, or it won't start. If it won't start, the possible problems are a failed fuel pump or a failed crank position sensor. If it won't crank, the issues could be a failed starter motor, a failed neutral safety switch, a failed ignition or a locked-up engine.
