A Comprehensive Approach To Stereotactic Breast Biopsy [PDF]

Stereotactic Radiosurgery (SRS) is a highly precise form of radiation therapy that can be used to treat benign and malignant tumors of the brain, as well as other conditions affecting blood vessels and nerves. Despite its name, SRS is a non-surgical procedure that delivers precisely-targeted radiation at much higher doses than traditional radiation therapy while sparing nearby healthy tissue.

OBJECTIVE Percutaneous stereotactic radiofrequency rhizotomy (PSR) is often used to treat trigeminal neuralgia, a serious condition that results in lancinating, episodic facial pain. Thorough understanding of the microsurgical anatomy of the foramen ovale (FO) and its surrounding structures is required for efficient, effective, and safe use of this technique.
