The name VR6 comes from the German initials for a V engine (German: V-Motor) and a straight (inline) engine (German: Reihenmotor), therefore the VR engine is described as a "Vee-Inline engine" (VR-Motor).. VR6 engines shares a common cylinder head for the two banks of cylinders. Only two camshafts are needed for the engine, regardless of whether the engine has two or four valves per cylinder.

I just replaced my Secondary AIR Pump for the second time in 13 months. It cost \$700 (would have been \$900 at the dealer). The local mechanic said it was full of water and claims that the water got in there because my bottom engine cover is missing. I said to him that the pump is pretty well sealed and I can't imagine how occasional splashing up from the ground could cause this, and that the ...
