Routing in an ANW2 (Adaptive Networking Wideband Waveform) cloud works a bit differently than with standard routers. To understand the difference, let's take a look at a basic routing diagram: As you can see above, the routers have backside networks (192.168.1.0/24, 2.0/24, 3.0/24) and point to point networks (192.168.12.0/24, 23.0/24).

The Basics of ANW2 Routing - Unadulterated Nerderly

The goal would be to be able to explain your ANW2 network in a single network statement. This concept is known as "summarization". It sounds like a pretty complicated concept, but it is actually pretty simple: Change the subnet mask. Instead of 192.168.1.0/30, 1.4/30, 1.8/30 and 1.12/30 you would have 192.168.1.0/28.

Networking Wideband Waveform (ANW2). The ROVER L-Band receive and APCO P25 are also available as optional waveforms. Future planned software upgrades include MUOS and SATURN waveforms (subject to NSA approval). AN/PRC-117G networking capabilities can be enhanced using the RF-7800B series of Broadband Area Global Network (BGAN) terminals.
