In soil physics more than in most subjects there has been a strong symbiotic relationship between the development of theory and practical applications on the one hand and the development of experimental methods on the other. For example, acceptance and use of the concept of matric potential, originally outlined by Buckingham in 1907, were greatly

Pedology and soil physics /hydrology have reached a point in their development where an integrated approach, as proposed in hydro-pedology, is bound to be more effective in making significant contributions to the sustainability debate in society as compared with continuing their monodisciplinary tracks. Hydro-pedology has therefore the potential to become a powerful tool for environmental policy and regulation.
