It tells the story of our origin, from expanding matter at the dawn of the Big Bang, to self-replicating molecules, to fish, mammals, monkeys, australopithecines, and, finally to modern human beings. On the recto, the author explains each step, usually with biological detail, and tells us about some of the other organisms that branched off at that specific point.

Bang!: How We Came to Be by Michael Rubino

"The illustrations in Michael Rubino's Bang! How We Came to Be are lively, breathtaking, flowing, thought provoking, colorful, and sharp. If they do not transport you and your children to the past and enchant . . . with the wonder that is nature and evolution—I give up.

Review: Bang!: How We Came to Be | Tessa de Leeuw ...

The universe began with an explosion we call The Big Bang Theory, and from there, amid cosmic dust and expanding gases, galaxies of stars were born. When the Earth cooled down, further changes occurred. Volcanoes erupted and added to the heat from the sun, allowed single celled organisms to appear, which then proceeded to colonize the seas.

We came to understand the building blocks of the universe by repeatedly taking things apart until we got to the smallest indivisible parts: the elementary particles, such as electrons. To do this, we built particle accelerators to make particles collide at close to the speed of light, then analyzed what resulted.

The Big Bang. Astronomers combine mathematical models with observations to develop workable theories of how the Universe came to be. The mathematical underpinnings of the Big Bang theory include Albert Einstein's general theory of relativity along with standard theories of fundamental particles. Today NASA spacecraft such as the Hubble Space Telescope and the Spitzer Space Telescope continue measuring the expansion of the Universe.
