In Berkeley DB Java Edition, an object of class Environment is mandatory to work with a BDB database. The first step in opening the database is creating this Environment object with a call to “new Environment”. The first argument to this call is the path where the data of the environment (including the databases in it) is located.

Berkeley DB now supports compression when using BTree. Berkeley DB introduces a new utility named `db_sql` which replaces `db_codegen`. Similar to `db_codegen`, `db_sql` accepts an input file with DDL statements and generates a Berkeley DB application using the C API that creates and performs CRUD operations on the defined tables.
