Ch. 10 Study Guide Answer Key

In organisms that reproduce sexually, meiosis is a two stage cell division process. The two stages of meiosis are meiosis I and meiosis II. After meiosis has completed, four distinct daughter cells are produced. The daughter cells that result from meiosis each have one half of the number of chromosomes of the parent cell.

During meiosis, diploid cells undergo two cell divisions that. result in haploid cells. VOCABULARY. gametogenesis egg. sperm polar body. MAIN IDEA:Cells go through two round s of division in meiosis. 1. After a chromosome is replicated, each half is called a . 2.

SECTION CHROMOSOMES AND MEIOSIS 6.1 Study Guide

Meiosis is a form of nuclear division that reduces chromosome number from diploid to haploid. Each haploid cell produced by meiosis has 22 autosomes and 1 sex chromosome. 1. How do gametes differ from somatic cells? 2. The prefix homo-means "the same." Explain how this meaning relates to the definition of homologous chromosomes. 3.

Biology Section 11-4 Meiosis Worksheet Answer Key

Meiosis is preceded by an interphase consisting of G 1, S, and G 2 phases, which are nearly identical to the phases preceding mitosis. The G 1 phase (the "first gap phase") is focused on cell growth. During the S phase—the second phase of interphase—the cell copies or replicates the DNA of the chromosomes.

In meiosis I, the offspring cells are haploid but each cell contains two copies of the chromosome because the original cell copied its DNA before meiosis I. The offspring cells of meiosis II are also haploid, but each cell contains only one copy of the chromosome because, unlike meiosis I, the cells do not copy their DNA before meiosis II. 4.
