Nutrition affects brain chemistry in humans and other animals. Everyone experiences the fact that food and nutrition alter mood and behavior. Indeed, food can be a strong conditioning stimulus. One exposure to an adverse stimulus coupled with a particular food can cause a lifetime aversion to that food (see Chap. 50). The neurochemical mechanisms of how diet alters brain function are beginning ...

Chapter Review Nutrition and diet affect your metabolism. More energy is required to break down fats and proteins than carbohydrates; however, all excess calories that are ingested will be stored as fat in the body. On average, a person requires 1500 to 2000 calories for normal daily activity, although routine exercise will increase that amount.
