Circular Motion Physics Chapter Important

Circular Motion. When a particle moves in a plane such that its distance from a fixed (or moving) point remains constant then its motion is called as the circular motion with respect to that fixed (or moving) point. That fixed point is called centre and the distance between fixed point and particle is called radius.

Non-uniform circular motion denotes a change in the speed of the particle moving along the circular path. In non- uniform circular motion, the size of the velocity vector (speed) changes, denoting the change in the magnitude of velocity. The change in speed has implications for radial (centripetal) acceleration. There are two possibilities:
