Codes and Ciphers Cryptography is split into two ways of changing the message systematically to confuse anyone who intercepts it: these are codes and ciphers. Many people believe, and use, the word code to mean the same thing as cipher, but technically they are different.

**Codes and Ciphers - Crypto Corner**
A code involves simple translation. "ABC" is code for "Hello There!" A cipher is like a mathematical function, you input something and get an output. I input "ABC" into the cipher and it outputs "Hello There!". Code is more direct, you just look up what something means. A cipher is a way of translating the code without having everything listed out.
