Acces PDF Data Domain Cloud Tier

Cloud Tier provides best of breed technology that will allow businesses to gain the advantages of cloud while lowering overall TCO. With Cloud Tier, data is natively tiered to the public, private or hybrid cloud for long-term retention. Only unique data is sent directly to the cloud and data lands on the cloud object storage already deduplicated. A broad ecosystem of backup and enterprise applications and a variety of public and private clouds are supported with Cloud Tier including Dell EMC ...

Dell EMC Cloud Tier | Dell Technologies US

Data Domain added a deduplicated cloud tier to its data protection appliances. Our deduplication system consists of an active tier where customers backup their primary data (typically retained for 30-90 days) and a cloud tier where selected backups are transitioned to cloud storage and retained long term (1-7 years).

Data Domain Cloud Tier: Backup here, backup there ...

Cloud Tier is local metadata that holds knowledge of all data that is sent to the cloud unit (ECS, Amazon, Azure or Virtustream), the intention of this locally connected metadata is to negate the requirement to read from the cloud unit to 'lookup' where data resides, this knowledge allows efficient cleaning of the cloud unit and allows only reads/restore of the data you actually want to recall from the cloud unit back to Active Tier for restore of data to your backup application.

Solved: what is data domain cloud tier and data domain

...

Data Domain Virtual Edition (DDVE) supports Azure, AWS and GCP with up to 96TB of usable capacity and its always-great deduplication ratio. That lets you go multi-cloud.

Multi Cloud Support with Data Domain Virtual Edition ...

The DD Cloud Tier functionality should manage the 'tiering' of data to Virtustream according to the preferences configured by the user in Avamar. If that isn't happening it would be appropriate to engage Professional Services (PS) to check the configuration.
