Many students assume that all equations have solutions. This article will use three examples to show that assumption is incorrect. Given the equation $5x - 2 + 3x = 3(x+4)-1$ to solve, we will collect our like terms on the left hand side of the equal sign and distribute the 3 on the right hand side of the equal sign. $5x ...$

How to Know when an Equation has NO Solution, or ...

The equation has no solutions. It was not helpful to have multiplied both sides of the equation by zero. It would have been better to have started by subtracting x from both sides, resulting in $0 = 2$, resulting in a false statement telling us that there are no solutions. Answer. There is no solution.
