ResinLab epoxy systems are typically in a two-component format containing a resin and a hardener. The resin can be a thin liquid or can be highly viscous. The high viscosity resins contain fillers, which can settle to the bottom of the container. Learn more about mixing and molding for epoxy systems.

Bottom paints are available in a variety of formulations. Most bottom paint systems are compatible with epoxy and can be applied directly over a prepared epoxy barrier coat. If you are unsure of compatibility or have curing or adhesion problems with a specific bottom paint, use only a primer recommended for that bottom paint over the barrier coat.

An epoxy coating can be placed on reinforcing steel in order to provide to steel definitive protection against corrosion because concrete will never be in contact with an interstitial solution having a low pH. It could be a foolproof solution if the epoxy can be glued very tightly with steel, which is not the case. Epoxy-coated steel is not a very efficient composite material because epoxy ...
