Understanding Evolution

The answer to this question is challenging, since paleontologists have only partial information on what happened when. So far, scientists have been unable to detect the sudden "moment" of evolution for any species, but they are able to infer evolutionary signposts that help to frame our understanding of the emergence of humans. Strong evidence supports the branching of the human lineage ...

human evolution | Stages & Timeline | Britannica

Evolution begins with self replication. Evolution on Earth began around four billion years ago. We don't have any record of that long lost microscopic beginning, but it may have been a single...

How does evolution start? - Answers

Creation vs. evolution isn't a matter of who has the most evidence. It's a battle of two worldviews. Creation starts with God's eyewitness testimony as the foundation. Evolution starts with man's ideas about the past. We both have the same evidence, but our different starting points determine our interpretation of the evidence.

Should Christian Schools Teach Evolution? | Answers in Genesis

In biology, evolution is any change across successive generations in the heritable characteristics of biological populations. Evolutionary processes give rise to diversity at every level of biological organization, from kingdoms to species, and individual organisms and molecules, such as DNA and proteins.
