values. Median

Example. For the data

set 1, 1, 2, 5, 6, 6, 9

the median is 5. For

the data set 1, 1, 2, 6,

6, 9 the median is 4.

Take the mean of 2

and 6 or,  $(2+6)/2 = 4$ .

The “median” is the “middle” value in the list of numbers. To find the median, your numbers have to be listed in numerical order from smallest to largest, so you may have to rewrite your list before you can find the median. 14, 14, 14, 14, 15, 15, 17, 19, 22. So the median in the set is 15. The Mode

Since there are an even number of values, the median will be the average of the two middle numbers, in this case 23 and 23, the mean of which is 23.

Note that in this particular data set, the addition of an outlier (a value well outside the expected range of values), the value 1,027,892, has no real effect on the data set.
