COMPREHENSIVE HATCHERY MANAGEMENT PLAN

A fish hatchery is a place for artificial breeding, hatching, and rearing through the early life stages of animals—finfish and shellfish in particular. Hatcheries produce larval and juvenile fish, shellfish, and crustaceans, primarily to support the aquaculture industry where they are transferred to on-growing systems, such as fish farms, to reach harvest size. Some species that are commonly raised in hatcheries include Pacific oysters, shrimp, Indian prawns, salmon, tilapia and scallops ...

Fish hatchery - Wikipedia

The efficient operation of a fish hatchery depends on a number of factor!>. Among these are suitable site selection, soil characteristics, and water quality. Adequate facility design, water supply structures, water source, and hatchery effluent treatment must also be considered.

Fish Hatchery Management (Classic Reprint): Piper, Robert ...

A fish hatchery is a facility designed to cultivate and breed a large number of fish in an enclosed artificial environment. It provides for fish eggs to develop and hatch by maintaining proper water temperature, oxygen levels, disease control, food and protection from predators. Some species are grown outside of their natural season.

Connecticut Fish Hatcheries

Fish hatchery managers use their knowledge of fish biology, ecology, chemistry and aquaculture technology to raise fish and shellfish in a wide range of settings. For instance, they may stock and manage fish in ponds, raceways, commercial net pens and recirculation systems for the purpose of food or recreational fishing.
