Plumbing Fundamentals Plumbing seems mysterious, mostly because so much of it is hidden inside walls. Household plumbing consists of a supply system, which brings water to the house and distributes it to various faucets and fixtures; a drain-waste system, which carries waste water away from the house; and a vent system, which carries away noxious gases and enables waste water to flow freely through drain pipes.

Raw and Finished Drinking Water. About two-thirds of Americans served by community drinking water systems obtain their raw (i.e., untreated) water from surface water sources, such as rivers, lakes and reservoirs. 4 The remaining third are served by municipal groundwater systems using wells, while some systems use both sources. In addition to source water protection, transforming raw surface water or groundwater into safe and clean (finished) drinking water requires appropriate treatment and ...
