The subset of GABA A receptors that also bind benzodiazepines are referred to as benzodiazepine receptors (BzR). The GABA A receptor is a heteromer composed of five subunits, the most common ones being two αs, two βs, and one γ (α 2 β 2 γ1). For each subunit, many subtypes exist (α 1-6, β 1-3, and γ 1-3).

Succinic semialdehyde dehydrogenase deficiency (SSADHD), is a rare autosomal recessive disorder of the degradation pathway of the inhibitory neurotransmitter γ-aminobutyric acid, or GABA.The disorder has been identified in approximately 350 families, with a significant proportion being consanguineous families. The first case was identified in 1981 and published in a Dutch clinical chemistry ...

These advances have not necessarily filtered through to general textbooks that form the cornerstone of many medical-related and basic science courses (see Ref. 26). In the present article, we describe the processes of thermoregulation, taking these recent advances into account so that those involved in teaching thermoregulation provide a more ...

Kisspeptins (Kp) are RF-amide neuropeptide regulators of the reproductive axis that also influence anxiety, locomotion, and metabolism. We aimed to investigate the effects of intracerebroventricular Kp-8 (an N-terminally truncated octapeptide) treatment in Wistar rats. Elevated plus maze (EPM), computerized open field (OF), and marble burying (MB) tests were performed for the assessment of ...

The lack of accessible noninvasive tools to examine the molecular alterations occurring in the brain limits our understanding of the causes and progression of Alzheimer's disease (AD), as well as the identification of effective therapeutic strategies. Here, we conducted a comprehensive profiling of circulating, cell-free messenger RNA (cf-mRNA) in plasma of 126 patients with AD and 116 ...

Introduction. Gastroesophageal reflux disease (GERD) has been defined from varied perspectives. According to the Montreal definition,1 "GERD is a condition which develops when the reflux of stomach contents causes troublesome symptoms and/or complications." The elegance of this definition is in its simplicity, uniting a large, seemingly unrelated set of symptoms and potential complications.

GABA B receptor antagonist promotes hippocampal neurogenesis and facilitates cognitive function recovery following acute cerebral ischemia in mice. Previous studies have suggested that promoting endogenous neurogenesis has great significance for the recovery of cognitive dysfunction caused by cerebral ischemia (CI).

Combination immunotherapy is promising to overcome the limited objective response rates of immune checkpoint blockade (ICB) therapy. Here, a tumor immunological phenotype (TIP) gene signature and high-throughput sequencing-based high-throughput screening (HTS2) were combined to identify combination immunotherapy compounds. We firstly defined a TIP gene signature distinguishing "cold ...

Insula volume has been found to be reduced among cocaine users, and longer use of cocaine is correlated to smaller volume of the insula (Ersche et al., 2011). In addition, smaller insula volume among cocaine users and abstainers is associated with impairments in attentional control (Ersche et al., 2011; Hanlon et al., 2011).
