By Edward Tetz . You will find two main types of networking cables in any bundle of cables lying around your office. The majority of the cables will be straight-through cables, but some may be crossover cables. In straight-through cables, the eight pins or wires that make up the cable match directly from one side of the cable to the other.

Some networking professionals use the term patch cable to refer to any kind of straight-through network cable used for a temporary purpose. Coax, twisted pair, and fiber optic types of patch cables exist. These cables share the same physical characteristics as other types of network cables except that patch cables tend to be a shorter length.
