Hematoma is generally defined as a collection of blood outside of blood vessels. Most commonly, hematomas are caused by an injury to the wall of a blood vessel, prompting blood to seep out of the blood vessel into the surrounding tissues. A hematoma can result from an injury to any type of blood vessel (artery, vein, or small capillary).

### Hematoma: Types, Symptoms, Pictures, Causes & Treatments

Hematomas are abnormal collections of blood outside of a blood vessel. Damage to the wall of the vessel causes leakage of blood into tissues that can be irritating and cause pain, tenderness, and swelling.

Last week, while giving platelets at the Red Cross, the needle came partially out of the vein. It was out for some time before I felt a lot of pain. When it was checked, I had a large hematoma, about the size of a baseball by my elbow and the fluid had filled all the way up to my arm pit. I put heat on it the first day and elevated the arm.
