Exponents may seem like advanced math —like some mysterious code with a complicated meaning. In fact, though, an exponent is just short hand for saying that you're multiplying a number by itself two or more times. For instance, instead of saying that you're multiplying  $5 \times 5 \times 5$ , you can show that you're multiplying 5 by itself 3 times if you just write  $5^3$ . We usually say this as "five to the third power" or "five to the power of three."
