How to Remove a Mercruiser Alpha One Outdrive | It Still Runs
First: Remove the prop, shift the drive to the required gear, if necessary, and remove the trim rams. Rest the rams gently against the boat, and tie them with cord to support them. Then remove the speedometer tube from the drive (not from the boat) inside the "helmet" near the exhaust inlet. Remove the bonding wire on the side.

How To Remove a Sterndrive | Boating Magazine
Disconnect the wires from the starter. Remove the lock nuts from the bolts holding the starter in position. Most Mercruiser starters have bolts that will run from the bottom to the top, rather than from side to side like on a car starter. Once the nuts are off, reach underneath and pull the bolts out.
