### Introduction to Topology(Exercises and Solutions)

Topology is the branch of mathematics that deals with surfaces and more general spaces and their properties, such as compactness or connectedness, that are preserved by continuous functions. Concepts such as neighborhood, compactness, connectedness, and continuity all involve some notion of closeness of points to sets.

Solutions to B. Mendelson: Introduction to Topology. This book is meant to cover a basic topology course for undergraduates and I found it very approachable even with my limited background in pure math. Moreover, being about 200 pages long and published by Dover, it costs the equivalent of a cheap lunch. The exercises are (so far) not very long and complicated, so I just attempted to write and scan them as I go and post in batches.

tient" topology is a reasonably chosen mathematical term. (4 credits { 2 of them for the explanation) Answer: Let  $X$  be a topological space,  $Y$  be a set and  $f: X \rightarrow Y$  be a surjection. Then the quotient topology on  $Y$  is the unique topology with which  $f$  becomes an identification map.

Written for undergraduate students of mathematics, this book serves as a fine introduction to topology from an abstract set-theoretic point of view. The approach of the author is also to have the reader do most of the proofs of the theorems in the book, and thus the book can be thought of as the student's second course in proof theory, the first being maybe Euclidean geometry.
