when there is nothing listed. If that happens, try again in a few days.

Kidney Regeneration

Kidney regeneration studies have demonstrated that renal progenitor cells derived from ESCs differentiated into glomerular-like structures and integrated into renal proximal tubules when implanted in vivo[42,43].

and the Sackler School of Medicine in Israel have shown how the kidneys constantly grow and have surprising ability to regenerate themselves, overturning decades of accepted wisdom that such regeneration didn't happen. It also opens a path toward new ways of repairing and even growing kidneys.

Adult kidneys constantly grow, remodel themselves, study ...

The researchers discovered that regeneration involves not only kidney-specific stem cells, as was previously thought, but other kidney cells that can also function as progenitor cells. Such cells function in maintenance of the kidney against normal wear and tear, or in
