Conveyor Belt Misalignment Switch Type MRS 001

Exactly and reliably, position misalignment switches monitor for possible drift on belt conveying systems. As the conveyor belt drifts, the edge of the belt touches the roller lever on the misalignment switch. Depending on the deflection, a pre-warning is signaled or a shutdown is triggered. In this way you can prevent unnecessary costs due to the loss of material and detect uneven belt wear at an early stage.

Position misalignment switches for conveyor belt systems ...

There are Possible 4 different mounting positions ($4 \times 90^\circ$) of the actuation lever onto the switch shaft. The axis of the roller should be in right angle to the plane of the belt. The shaft of the switch should be above the housing.

Conveyor belt misalignment (off-track) switch LHR

PRODUCT OVERVIEW The Touchswitch™ is an electro-mechanical limit switch with no moving parts, which detects tracking and misalignment problems on bucket elevators and conveyors.

OPERATION MANUAL

Belt misalignment switches are mounted on the top or bottom of the conveyor stringer with the

The Touchswitch™ is an electronic limit switch. When a belt misaligns or a pulley moves over and contacts the sensor, the built in solid-state electronic circuitry detects the lateral force of the belt or pulley and activates a voltage free relay contact. This relay contact is used to immediately alarm and shutdown the machine.
