Reading books New liver anatomy—Portal segmentation and t

Abstract. Endoscopic ultrasound (EUS) can demonstrate the detailed anatomy of the liver from the transgastric and transduodenal routes. Most of the liver segments can be imaged with EUS, except the right posterior segments. The intrahepatic vascular landmarks include the major hepatic veins, portal vein radicals, hepatic arterial branches, and the inferior vena cava, and the venosum and teres ligaments are other important intrahepatic landmarks.

New Liver Anatomy Portal Segmentation And The Drainage ...

As mentioned above, portal embolisation consists of embolising the portal branches of the liver that will be removed about 4 weeks before the surgery, in order to increase the volume of the liver left in place, by redistribution of the portal blood flow , , . Portal anatomic variations increase the complexity of this procedure.
