## Nuclear Fission And Fusion Pogil - Yumpu

Nuclear fission and nuclear fusion are different types of reactions that release energy (when exothermic) due to the formation of nuclei with higher nuclear binding energy.

Nuclear fission is a nuclear reaction in which the nucleus of an atom splits into smaller parts (lighter nuclei).

### **Power**

Fission, on the other hand, is the complete opposite: Very large nuclei are split to make smaller ones, releasing energy (and a boatload of radiation) in the process. Again, the best fuels are the most unstable: Isotopes like uranium-235 or plutonium-239 don't occur naturally. Fission is used both for nuclear
