immunology focuses on the study of host-pathogen interactions at the molecular and cellular levels. Faculty research programs focus on how microorganisms interact with surfaces, how they survive inside and outside of their hosts, how signals are relayed between the microorganism and the host, and how the host responds to these signals.

is focused on Cellular Microbiology, which is the interface of Cell Biology and Pathogenic Microbiology. The research studies involve mechanisms of exploitation of the host cell biology by the two intracellular bacterial pathogens, Legionella and Francisella, and this microbial exploitation is essential for the pathogens to cause disease.
