Probability Questions with Solutions. Tutorial on finding the probability of an event. In what follows,  $S$  is the sample space of the experiment in question and  $E$  is the event of interest.  $n(S)$  is the number of elements in the sample space  $S$  and  $n(E)$  is the number of elements in the event  $E$ .

# Download Ebook Probability And Statistics **Questions with Solutions**

Statistics Solutions is the country's leader in probability and dissertation statistics. Contact Statistics Solutions today for a free 30-minute consultation. A sample space ( $S$ ) is a non empty set whose elements are called outcomes. The events are nothing but the subsets of the sample space.

## **Introduction to Probability and Statistics ...**

Find the conditional probability? Solution:  
The total number of possible outcomes of rolling a dice once is 6. Hence, the total number of outcomes for rolling a dice twice is  $(6 \times 6) = 36$ . The probability of getting an odd and even number is 18 and the probability of getting only odd number is 9.
