overfilling, underfilling, ledges and so on are the direct cause of endodontic failure. In most cases, procedural errors do not jeopardize the outcome of endodontic treatment unless a concomitant infection is present. In truth, a procedural accident often impedes or makes it impossible to accomplish appropriate intracanal procedures.

overfilling, underfilling, ledges and so on are the direct cause of endodontic failure. In most cases, procedural errors do not jeopardize the outcome of endodontic treatment unless a concomitant infection is present.

## **REVIEW Blackwell Science, Ltd Aetiology of root canal ...**

Other errors like imperfect cleaning and under filling were frequent not too different from overfilling. This is while zipping and gouging were too scarce and no case of furcal perforation was found. Mukhaimer named under filling as the most frequent procedure-induced error, particularly in maxillary molars.

## **Frequency of Iatrogenic Errors through Root Canal ...**

Perforation was the procedural errors most commonly observed (58.14%). Most of the procedural errors were observed in the mesiobuccal root canal (48.84%). In the analysis of procedural errors, there was a significant difference

Procedural errors, such as fractured instrument, ledge, perforation, overfilling and so on, are not the direct cause of the post-treatment disease. 33, 34 In most of the cases infection is also...

### **Causes and management of post-treatment apical ...**

Procedural Errors Whenever performing endodontic therapy, procedural errors can occur. Common errors include fracture of endodontic instruments within the canal, perforation of the root or pulpal floor. Zipping (transportation of the apex) or ledging of the canal with overzealous instrumentation can also occur.
