The rat that you will be dissecting is (what is referred to as) a common 'lab rat'.

These white (albino) rats are the result of interbreeding of two wild rat species: brown and black rats. This type of breeding has produced a rat that is much smaller and far less aggressive than its ancestors, so they can easily used by humans in a lab setting.

Dissection Introduction:
Echinoderms are radially symmetrical animals that are only found in the sea (there are none on land or in fresh water).

Echinoderms mean “spiny skin” in Greek. Many, but not all, echinoderms have spiny skin. There are over 6,000 species.
