Seven chemical separations to change the world | Nature ...

Introduction. Most processes, both physicochemical and biological, involve one or more separation process. Human physiology, for example, requires the transfer of oxygen from air in the lungs to the blood stream, and the simultaneous transfer of CO₂ from the blood stream to the lungs for removal. The function of the kidney is to process a continuous flow of liquid in order to separate waste ...

Separation processes (Book, 1980) [WorldCat.org]

Most industrial chemical processes involve a separation stage. This may involve a preliminary purification stage before the reaction process, or a final stage involving the separation of the desired product. Two well-known processes are distillation (Fig. 1) and crystallization. The content above is only an excerpt.
