The architecture of a Serverless Single-Page React App Like any web-application, web-site, or web-service, the life cycle of a Serverless Single-Page React App starts with an HTTP (s)-request (step 1). The user's browser sends a GET -request to the server hosting your app. This server is the AWS Simple Storage Service (S3).

### The Case Of A Serverless Single-Page React App | by Frank ...

Web applications represent a major category of serverless usage. When used with single-page application (SPA) frameworks for front-end development, you can create highly responsive apps. With a serverless backend, these apps can scale to hundreds of thousands of users without you managing a single server.

### Building a location-based, scalable, serverless web app ...

The front end of this reference architecture is a single page application, with JavaScript accessing the serverless back-end APIs, and static content providing a fast user experience. The following are some important considerations for such an application:

### Serverless web application - Azure Reference Architectures ...

[DOC] Serverless Single Page Apps serverless single page apps leaderboard-page which is a Single Page App written in Vue.js and served by a Node.js function as a static website. It makes a GET request using axios to the leaderboard function. They are both served from the same domain so there are no concerns about CORS.

### [DOC] Serverless Single Page Apps

application server, and one or more back-end services make up the tiers in the system. With a serverless approach, you can remove all these tiers in favor of some-thing more direct. Instead of treating the web client as the interface to the application server, you can move the application logic into the browser by building a single page web application.
