Servo Drive Baumuller

The Baumüller servo drives are available as controller models for simulation in the ProSimulation software. You use this data to design the optimal automation and drive components for your machine and test the settings, without risk, virtually – all possible from your desk, even without detailed simulation knowledge.

Servo drive for automation and motion control

Servo motors for plastic and rubber applications. The Baumüller servo motors were optimized even further for plastic and rubber applications as well as for printing, forming and textile machines through speed increases and performance enhancements and are ideally suited for the most demanding applications in machine construction. The robust and compact motors are also largely maintenance-free, which is another plus for economical operation.
