And Solutions

The easiest way to solve problems on sets is by drawing Venn diagrams, as shown below. As it is said, one picture is worth a thousand words. One Venn diagram can help solve the problem faster and save time. This is especially true when more than two categories are involved in the problem.

Get Free Set Theory Problems And Solutions

This series of lessons cover the essential concepts of math set theory - the basic ways of describing sets, use of set notation, finite sets, infinite sets, empty sets, subsets, universal sets, complement of a set, basic set operations including intersection and union of sets, using Venn diagrams and simple applications of sets.

Math: Sets (solutions, examples, videos)

A set X is a subset of a set Y (or $X \subseteq Y$) if all elements X are also elements of Y . That is if for all x , $x \in X$ implies $x \in Y$, or in symbols $\forall x(x \in X \rightarrow x \in Y)$ For example, Reptile = {snake; alligator} \subseteq Animal We can also give a subset by taking all the elements that satisfy a particular property. For example,

ELEMENTARY

OPERATIONS ON SETS

3 Proof. Let X be an

arbitrary set; then

there exists a set $Y \subseteq X$

such that $Y \cap X = \emptyset$. Obviously, $Y \subseteq X$,

so $Y \subseteq X$ by the

Axiom of Power Set. If $Y \subseteq X$,

then we have $Y \subseteq X$ if and

only if $Y \subseteq X$. [See Exercise

Example: Given the set P is the set of even numbers between 15 and 25. Draw and label a Venn diagram to represent the set P and indicate all the elements of set P in the Venn diagram.

Solution: List out the elements of P. $P = \{16, 18, 20, 22, 24\}$ ← 'between' does not include 15 and 25
Draw a circle or oval. Label it P. Put the elements in P.
