Solution: The only numbers divisible by 5 are numbers which end in 5 or 0. So we want to know how many numbers between 99 and 1000 end in a 5 or a 0. The first one is 100 and the last is 995, so there are $1+(995-100)/5 = 180$ such numbers. • Findadivisibilitytestfor125.

4 Chapter 1 Solutions Proof. If $(a=b)^m = n$, then $a^m = b^m n = 1 = 0$. Thus by Exercise 1.7, $(a,b) = 1$, and so $b = 1$. Next suppose $n = a^m$ where $(a,b) = 1$. Then $n = (a=b)^m$, which we now know implies $b = 1$. Therefore $n = a^m$, i.e. n is an m th power. Exercise 1.14. If $(a,b) = 1$ and $ab = c^n$, prove that $a = x^n$ and $b = y^n$ for some x and y . [Hint: Consider $d = (a,c)$.] Proof.

Number theory (or arithmetic or higher arithmetic in older usage) is a branch of pure mathematics devoted primarily to the study of the integers and integer-valued functions. German mathematician Carl Friedrich Gauss (1777–1855) said, "Mathematics is the queen of the sciences—and number theory is the queen of mathematics." Number theorists study prime numbers as well as the properties of ...

Indefinite equation is an unsolved problem in number theory. Through exploration, the author has been able to use a simple elementary algebraic method to solve the solutions of all three variable indefinite equations. In this paper, we will introduce and prove the solutions of Pythagorean equation, Fermat's theorem, Pell equation and so on.
