### Stats Test Answer Key

In a statistics course, a linear regression equation was computed to predict the final-exam score from the score on the first test. The equation was  $y = 10 + 0.9x$  where  $y$  is the final-exam score and  $x$  is the score on the first test. Carla scored 95 on the first test. What is the predicted value of her score on the final exam?
