Sissy Boy Syndrome." According to the DSM III, there are two main components that must be present to diagnose an individual with Gender Identity Disorder. First, with the child, there must be "strong and persistent" cross-gender identification, that is, a child wanting to be a member of the opposite sex. Evidence for this identification

This book is one of the very few available that validates boys who go through a sissy stage during their childhood in an intelligent fashion. Through research and analytical thinking and writing, Green finally validates that in his research he found that "it is not playing with girl toys and identifying with female play that makes a boy gay, it is a strong indicator that he already is gay however".
