Traditional Chinese Medicine Scientific Basis

Traditional Chinese medicine has a strong scientific basis, but the science of these important preparations is often rarely discussed. Western approaches often simplify traditional Chinese medicine to drug discovery in Chinese plants, however, the majority of traditional Chinese medications use complex mixtures of plant extracts, rather than single purified drugs.

According to traditional Chinese medicine, acupuncture is based on the idea of Qi (pronounced and often spelled Chi), which is envisioned as a type of life-giving energy that circulates through the body in special channels. Acupuncture is thought to release blockages in these undetectable channels, restoring the flow of Qi through the body.
