UML Diagram Types Guide: Learn About All Types of UML ...

UML 2.5 Diagrams Overview. A UML diagram is a partial graphical representation (view) of a model of a system under design, implementation, or already in existence. UML diagram contains graphical elements (symbols) - UML nodes connected with edges (also known as paths or flows) - that represent elements in the UML model of the designed system. The UML model of the system might also contain other documentation such as use cases written as templated texts.

UML 2.5 Diagrams Overview

thorough reference for the working professional developer. It also attempts to pro-vide additional detail about issues that may not be clear from the standards docu-ments and to provide a rationale for many decisions that went into the UML. This book is not intended as a guide to the UML standards documents or to the

The Unified Modeling Language Reference Manual

Besides using rectangles to represent classes, class diagrams include arrows to represent relationships among classes. UML uses a variety of types of arrows. A solid line with a hollow closed arrow at one end represents inheritance. The arrow points to the base class.

How to Diagram Java Classes with UML - dummies

Component Diagrams. The only difference between a component and a subsystem is size. Component diagrams are almost identical to subsystem diagrams. Activity Realization Diagram. is an activity diagram redrawn to look more like a collaboration-diagram. Refer to the UML Superstructure document for more details. Footnotes Composition vs. Aggregation:
