Urinary & fecal incontinence current management concepts ...

In the self-management of urinary or fecal incontinence, a precondition for success is the proper treatment of any underlying etiologies. Patients' self-management behaviors then operate as if in a feedback loop, with patients becoming more knowledgeable about their needs and the management strategies that work best for them. 12 In the context of incontinence, six specific self-management behaviors come into play:

Self-Management of Urinary and Fecal Incontinence

While self-management is widely accepted as a means of coping with such chronic health conditions as diabetes, asthma, and arthritis, its value in treating urinary and fecal incontinence is not fully appreciated by many health care providers, who may be aware of the daily challenges faced by those with these conditions, but unsure of how to best support patients in effective self-management.

Self-Management of Urinary and Fecal Incontinence ...

Even among women with both urinary and fecal incontinence presenting for urogynecologic care, the rate of verbal disclosure of fecal incontinence symptoms remains low. This article provides an overview of the evaluation and management of fecal incontinence for the busy obstetrician-gynecologist, incorporating existing guidance from the American ...

Urinary and Fecal Incontinence : Current Management ...

Constipation is known to contribute to the incidence of urinary incontinence. The pressure of an impacted rectum against the bladder causes over-activity and possible leakage, therefore it is important to include management of bowel health in the management plan (Bostock 2019). The following is indicated as promotive to optimal bowel health:
