Power Delivery starts at the 5-V setting and is configurable up to 20 V. Using a standard USB-C cable, it can handle up to 60 W and will go up to 100 W using a full-featured USB Type-C (ECMA) cable. Another point of interest regarding Power Delivery is that it allows for power to flow both ways, with no set direction based on circuit or connection.

USB Power Delivery | USB-IF

USB Power Delivery is a separate specification that can work across USB 2.0 and 3.0 ports and cables, but you'll still need a USB Type-C port too due to the communication pins used by the standard.

USB-C (formally known as USB Type-C) is a 24-pin USB connector system with a rotationally symmetrical connector.. The USB Type-C Specification 1.0 was published by the USB Implementers Forum (USB-IF) and was finalized in August 2014. It was developed at roughly the same time as the USB 3.1 specification. In July 2016, it was adopted
